Coolant pressure gauging-kit for machining centres and deep hole drilling machines

Quite often the set value at the pressure gauge is not reflecting the value that actually reaches the tool. Numerous sources for errors such as leaking valve parts, faulty rotating connectors or snapped hose lines are not visible on first sight. Leading to a decreased coolant pressure, this could influence the drilling result negatively.

The gauging-kit developed by botek measures the real pressure – directly at the spindle/tool (up to a max. of 160 bar). Taken measurements consider different coolant channel sizes.

The following methods are available:

1. Measurement of the machine pump performance:
   By means of a tool dummy a tool-independent check can be carried out – a big advantage.

2. Measurement with the tool:
   The tool dummy is replaced by the actual drill. The pressure can be checked directly at the tool.

For machining centres:

- Spindle adaptor for collet chuck ER-32 with cylindrical shaft Ø 20.0 (h5) mm, incl. nut for sealing disc assembly
  - 1 pc.

- Collet chucks ER-32 (4/6/8/10/12/16/20 mm)
  - 7 pcs.

- Sealing discs (4/6/8/10/12/16/20 mm)
  - 7 pcs.

- Dummies for tool simulation
  - 14 pcs.

- Open end wrench for adaptor
  - 1 pc.

- Wrench for nut
  - 1 pc.

For deep hole drilling machine:

- Special adaptor for driver 25x100/112 mm as per VDI 3208 (ZH25-34).
  - 1 pc.

  The adaptor can be modified to suit different drivers, if required.

Smaller lathe and machining centres:

- Dummy adaptor Ø 10.0 mm incl. 4 dummies
  - 1 pc.

- Allen key, size 8
  - 1 pc.

- Aluminium case
  - 1 pc.
